12. Two Important Notes!

1. When using your Gmail app on your phone, make sure Mobile Signature in signature settings is turned off. The mobile signature doesn't allow for you use to use images and such. When the mobile signature is turned off, it uses the signature that you set as default on your desktop.

2. When you type an email in the Gmail app on your phone, the signature will not appear. However, the person receiving the email sent from your phone will see the email signature.
